DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arai et al. [JP 08-250339] in view of Niwa et al. [US 5,063,098].

Arai et al. discloses a grain-oriented electromagnetic steel plate/sheet for forming an iron core for a low noise induction apparatus comprising:

- an electromagnetic steel plate/sheet [a]; and
- a viscoelastic layer [b] disposed on at least one surface of the electromagnetic steel plate/sheet.

Arai et al. discloses the instant claimed invention except for the specific thickness of the viscoelastic layer.

Niwa et al. discloses an electrical steel sheet [1] including at least one viscoelastic layer of $30\mu\text{m}$ or more to $60\mu\text{m}$ or less in thickness disposed on at least one of the surfaces of the steel sheet, wherein the viscoelastic layer having the loss factor have one or more peaks at temperatures within the range from 20 to 200 degrees Celsius.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the viscoelastic layer design of Niwa et al. for the viscoelastic layer of Arai et al. for the purpose of providing vibration damping effect.

Art Unit: 2832

Regarding claims 4, the specific arrangement of the viscoelastic layer relative to the steel sheet would have been an obvious design consideration based on the intended applications/environments use for the purpose of reducing noise.
